

Hints For Using Of Byllux 5791

Byllux 5791 is a solvent free adhesive curing with UV-A light. This adhesive consists of different components like prepolymers, monomers, initiators, etc.

Some of these monomers **may** irritate skin, so that is essential to wear always gloves out of nitric rubber or operation gloves out of latex (single use gloves), never use textiles!, if the adhesive is handled in liquid state. Also use protective glasses.

If skin was in contact with skin **or** gloves wash with soap and water.

Once Byllux 5791 is cured there is no healthy problem.
